

Port Said University

Chemistry Department

Faculty of Science

Polymeric Nanoparticles For Drug Delivery

To

Central Nervous System

Under The Supervision of

Assoc Prof Ayman S. Al-Hussaini

Prepared by

Menna Allah Khamis Aly

Fourth level student

Biochemistry Department

(2015-2016)

Acknowledgement

Firstly, I thank my God for providing me with everything that I require in completing this project.

I would like to express my deepest thanks to my supervisor " *Dr. Ayman S. Al-Hussaini*" for his patient guidance , constant supervision and his continuous support, I consider myself lucky for being able to work with a very professional lecture like him .

Also I'd like to thank "*Dr. Ibrahim Mohey*" head chemistry department Port Said University for his contribution.

I'd like to express my special gratitude to all doctors and demonstrators who taught me during the four years.

My deepest thanks and appreciation to my parent, family and friends for their cooperation, encouragement which helped me In the completion of this project.

Menna Khamis Aly

Table of Contents

1.introduction	1
2.nanoparticales	6
2.1.Polymeric nanoparticle as a drug delivery tool	6
2.2.Smuggling Drugs into the Brain	8
2.3.polymeric nanoparticales	8
2.4.features of an ideal polymer nanoparticale delivery system	10
2.5.Advantages of polymeric nanoparticales	10
3.polymers used in preparation of nanoparticales	11
3.1.methods of preparation of nanoparticales from dispersion of performed polymer	11
3.1.1. Solvent evaporation	11
3.1.2.emulsification/solvent diffusion(ESD)	13
3.1.3.dialysis	13
3.1.4.salting out	14
3.1.5.supercritical fluid technology	15
3.2.methods for preparation from polymerization of monomers	15
3.2.1.emulsion polymerization	16
3.2.2. mini-emulsion polymerization	17
3.2.3. Micro-emulsion polymerization	17
3.2.4 Interfacial polymerization	18
3.2.5. Controlled/living radical polymerization (C/LRP)	19
3.3. Ionic gelation or coacervation of hydrophilic polymers	20
4. What is the blood brain barrier (BBB)	21
4.1.Why study the BBB	21
4.2. Neurovascular System	21
5. THE PRIMARY ROLE OF THE BBB	22
5.1. Barrier function and a Carrier function	22
5.2. Carrier function	22
6. Cellular components of the BBB	23
6.1. Endothelial cells	23
6.2. Astrocytes	23
6.3. Pericytes	24
6.4. functions of BBB	24
6.5. Modulation of BBB function	24

6.6. Transport Mechanisms	25
6.6.1. Paracellular (aqueous) diffusion	25
6.6.2. Transcellular (lipophilic) diffusion	25
6.6.3. Transport proteins /carrier-mediated transport	26
6.6.4. Efflux pumps	26
6.6.5. Adsorptive-mediated transcytosis (AMT)	26
6.6.6. Receptor-mediated endocytosis	27
7. Applications of synthetic polymers in clinical medicine	27
7.1. Examples for synthetic polymers	28
7.1.1. Polyolefins	29
7.1.2. Poly(tetrafluoroethylene)(PTFE)	29
7.1.3. Poly(vinyl chloride) (PVC)	29
7.1.4. Silicone	29
7.1.5. Methacrylates	30
7.1.6. Polyesters	31
7.1.7. Polyethers	32
7.1.8. Polyamides	32
7.1.9. polyurethanes	32
8. Application of polymers in cardio-vascular intervention	33
8.1. polymeric heart valves	33
8.1.1. Future prospects of polymeric heart valves	35
9. Chitosan nanoparticles as a drug delivery	37
9.1. Properties of Chitosan	37
9.2. Role of Chitosan in Colon Targeted Drug Delivery	38
9.3. The Usage of Chitosan-Functionalized Mesoporous Silica Nanoparticles in cancer treatment.	41
10. Polymeric Nanosystems for Tumor-Targeted Delivery	44
10.1. Polymeric Nanoparticles to Control the Differentiation of Neural Stem Cells in the Subventricular Zone of the Brain	46
11. New targets for drug delivery across the BBB	48
12. Pathological states involving BBB breakdown	51
12.1. Alzheimer's Disease and the Blood-Brain Barrier	51
12.2. Therapy	53
13. References	55
